

CENTRAL POWER SERVICES LIMITED
VACANCY FOR GENERATOR SERVICE ENGINEER
Permanent
Lancashire / North West

An additional Generator engineer is required by our Service Department. The successful candidate will have an extensive experience in the field of industrial diesel engines. The primary role of this position is the servicing, repairing and overhauling of diesel engines on our own and our customers generating sets.

Duties:

On site servicing of customer diesel generating sets at locations across the UK. Identification and diagnosis of faults and subsequent rectification and testing of equipment. The candidate will have a good ability and aptitude to be able to carry out temporary repairs to keep the client operational whilst the correct parts are ordered. Dependant upon the site locations, the successful candidate may need to work away from home on the odd occasion. The company offers a true 24/7 call out service and as such the successful candidate will need to partake in the call out rota. As the demands of the business vary, it is likely that this candidate will become involved in other aspects of our operations such as generator installation and fabrication work, and UPS battery build installations.

Additional Duties:

Call Out Rota – approx 1 week in 8
Generator servicing and maintenance at customer premises
Generator Load Testing
Generator commissioning
Generator fault finding
Basic Generator electrical repairs
Attendance of Factory Training Courses is mandatory.

Experience / Qualifications:

Min 5 years experience working in the diesel generator field
City & Guilds / NVQ in engineering
Knowledge of a variety of manufacturer's equipment
Manufacturers Training Courses would be an advantage
Ability to work as a team player and also unsupervised
Clean Driving Licence

Wish List:

Served a recognised apprenticeship
Computer literate, word, excel, plc languages and other software an advantage
Experience in diesel engine diagnostics
Happy to multitask
Can Do Attitude
