

## SPECIAL PROJECTS

Our special projects department design, supply and install systems entirely to client specifications. One of our core strengths is that all work is carried out by in-house staff, and because we retain these skills in-house, this means that we have greater control of manpower and associated completion target dates.

Our special projects department ensures that any project with more specific and detailed requirements will receive individual attention throughout the entire process.

Our Project Managers take full responsibility for all pre-start paperwork including Method Statements, Risk Assessments, Site Visits, Design, Gant Charts, PDI right through to delivery, offloading, positioning, mechanical and electrical installation, testing and certification to the latest standards and finally warranty documentation, hand over and service contract recommendations.

## THERMAL IMAGE SURVEYS

Increasingly we are being asked to provide specialist surveys and reports on existing site electrical installations. CPS understands that down time for maintenance is both time consuming and expensive for our customers.

We can provide a thermal imaging survey, which will highlight any underlying power problems without the necessity to isolate the mains supply.

## GENERATOR AND UPS INSTALLATION SERVICES

CPS takes responsibility for all delivery, off-loading and positioning, mechanical and electrical installation, and all building works, to ensure minimum on-site delays. This complete range of in-house services allows CPS to provide a one stop shop for all clients who require a company capable of managing and executing a complete generator and UPS installation from initial design to handover and commissioning.

Upon completion of the mechanical and electrical installations all aspects of the works are demonstrated and handed over to the customer together with a complete documentation package containing drawings, instructions and manuals.

## LOAD BANK TESTING

Many companies are naturally very apprehensive about self-testing their generator system by turning off their power supply and leaving the change over panel to switch power source.

By choosing CPS to fully test your generator under critical load, you have the reassurance of knowing that there is a highly trained service engine on site in case any problems should arise.

## PARTS

Central Power Services stocks a wide selection of spare parts in our spare parts division. We carry the most common printed circuit boards together with standalone controllers, changeover contracts, starter batteries and a large quantity of engine spares of various makes. As distributors for FG Wilson, CPS parts department offer a comprehensive service for all clients parts needs.

## INTRODUCTION

When it comes to servicing your emergency standby power equipment, who else would you put your confidence in than CPS, a family owned private limited company with over 20 years experience in its field? Based centrally in Lancashire, and specialising in the supply, installation and maintenance of emergency power systems, we've been inspiring the confidence of businesses and service providers, across both the UK and Europe, since 1986, offering:

- Generators
- UPS
- Generator Hire
- Service & Maintenance
- Specialist Transport
- Special Projects
- Thermal Image Surveys
- Generator and UPS Installation Services
- Load Bank Testing

## GENERATORS

We have a large warehouse on-site and stock a huge range of generators and supporting equipment, ready to dispatch to customers quickly and with the minimum of fuss.

We are one of the UK's largest stocking dealers for FG Wilson Diesel Generating Sets and association changeover panels, control panels, fuel tanks and bespoke soundproof canopies and containers.

Our in-house technical team are highly trained and have a great deal of specialist knowledge which means that we can easily modify existing stock generators to meet your individual customer requirements.

We have our own fleet of vehicles, including specialist rear mounted hiab vehicles, which means that we have full control of all deliveries and off-loading to ensure your order reaches you in the quickest possible time.

## UNINTERRUPTIBLE POWER SUPPLIES

We offer sales, installation, service and advice in any situation where constant power is essential. We excel at supply and installation packages for standalone UPS or for Generator and UPS combined packages.

We offer complete emergency backup power solutions and can also provide specialist project management to ensure that the final installation surpasses the client's expectations with regard to quality, performance and cost.

CPS can offer total power solutions to our client's problems, and we provide complete packages to protect against electricity supply break down.

Our dedicated team of UPS service engineers are on call 24 hours a day for all our contractual customers. Our service contracts are tailor made to provide various levels of emergency response to suit client requirements. We also offer routine preventative and scheduled maintenance contracts and battery autonomy testing.

## GENERATOR HIRE

We boast a comprehensive hire fleet of diesel generating sets that are suitable for a wide range of applications. Our hire service is available 24 hours a day, every day.

Our generators are regularly replaced thereby ensuring optimum reliability and keeping us abreast of new technological developments.

We pride ourselves on looking after our fleet of equipment so that when it arrives with you it is tested and operating as good as new. All our generators meet UK noise legislation as well as fuel tank and emission regulations.

We have our own fleet of specialist transport to deliver and collect all of our hire equipment nationwide and because we use our own transport this means that if you need a generator in a hurry, we have the in-house resources to make it happen.

## SERVICE AND MAINTENANCE

All our service contracts are tailored to suit individual customer requirements, whether the machine is running 24 hours a day, or is a standby to operate in the event of a power failure.

We have a team of mobile service engineers with modern well-equipped vehicles, the latest telecommunications, satellite tracking and laptop diagnostic tools to carry out service and preventative maintenance.

In the event of an emergency situation, our telephone support team can offer, where appropriate, several recommendations for the owner/operator to try whilst a factory trained engineer is dispatched to the site to restore essential power supplies and/or carry out a repair. All the service vehicles are well stocked with a variety of spare parts such that a first time repair is normally the rule and not the exception.

We carry out full repairs on site or remove the equipment back to our workshops for major repairs if appropriate to do so. We can also upgrade control systems, governing systems and other components to more modern equivalents so that the end user can benefit from the latest technology.

In an emergency situation our clients benefit from knowing that we can provide up to the second provisional data on all our vehicles, whether service or delivery vehicles, thereby eliminating the frustration of not being able to have an immediate answer about the arrival times of engineers and goods. This has proved especially useful for clients awaiting delivery of emergency hire equipment.

## SPECIALIST TRANSPORT

Central Power Services can cater for all your transport requirements, from large equipment deliveries and re-locations, to small fuel top up services to name but a few. These specialist transport services are available 24 hours a day.

Significant investment has been made with regard to the provision of specialist Heavy Goods transport vehicles for in house and for contract hire. The vehicles have been especially designed with on board cranes including:

- 11.5m reach (capable of carrying 4.5 tonnes at this reach)
- 56 tonne metre crane
- 20ft ISO twist locks
- Remote controlled crane operation that enables the operator to stand next to the load at all times
- Vehicle Satellite Tracking

We also provide a 24/7 refuelling service to all our customers.
